

# Roland HOTbox™ for Encaustic Monotypes

The authentic Roland HOTbox, produced and fabricated by Paula Roland, is now available exclusively from Vent-A-Fume. Widely used by encaustic medium artists and teachers, the Roland HOTbox is often considered the most useful, versatile, and energy efficient equipment for working in the encaustic medium.

Four 100-watt light bulbs inside an insulated framed box heat an anodized aluminum plate to between 155°F (barely melting wax) and 200°F. The heated plate melts the wax to serve as a palette when painting with an encaustic brush or tool.

The molten image of the monotype created is then transferred to an absorbent paper, a fabric,

or other substrate. No fusing required. No heavy, expensive press is needed.

**1** Year Warranty

- Anodized plate (available in 3 standard sizes) provides a strong, protective finish that is easy to clean and keeps colors from changing (oxidizing).
- Temperature sensor will cause the bulbs to turn off if the temperature reaches 210°F.
- Heavy-duty, detachable electric cord.
- Dimmer box with safety fuse to protect the equipment against a power surge.

Model	Price	HOTbox Plates Only	Price	Accessory Plates	Price
HB17-Single	\$599.00	Single Plate	\$160.00	10-in. x 8-in.	\$35.00
HB17-Double	\$1,198.00	Double Plate	\$320.00	8-in. x 4-in.	\$20.00
HB17-Pro-Set	\$2,396.00	Pro-Set Plate	\$640.00		
HB17-Single (No Plate)	\$480.00				

Each Gen3 model measures 16-in. x 22-in. x 6.25-in. (high).
